

Install Boots and Boxes Quickly with Snap-On Rails

Many M&M Register Boots and Boxes are designed with quick, easy, no fuss installation in mind when using Snap-On Rail mounting. No need to become a carpenter, waste time looking for lumber, framing in wood strips and runners just to mount a register box or boot. **Stick to what you do best....installing duct!**

Snap-On Rails are sold separately. The mounting rails work with M&M fittings* equipped with the snap-on rail flange. Rail flanges on all 4 sides of the fitting provide versatility for your installation.

Recommended Installation

1. Approximately center a Snap-On Rail on desired side of box or boot rail flange. Short leg of Snap-On Rail faces collar side of fitting.
2. Push Snap-On Rail onto rail flange. Audible "snaps" will confirm the Snap-On Rail has engaged with the Flange Snap Lock. Repeat procedure on side opposite.

NOTE: The same procedure is used for #602R6 DucTite® Insulator Boot as well. NO need to remove the green DucTite® Insulator. The Insulator is designed with clearance for the Snap-On Rail.

3. With Snap-On Rails in place on two sides of the fitting, position the assembly in location on the ceiling joists overhead.
4. Next, drive fasteners through Snap-On Rails into joists. Drive fasteners on each end of each Snap-On Rail (4 places, Fig 1).
5. Fitting may then be slid laterally between the joists on the Snap-On Rails for final position (Fig 2). In this manner, complete installation of the fitting can be achieved in less than one minute. **How's that for time savings?**
